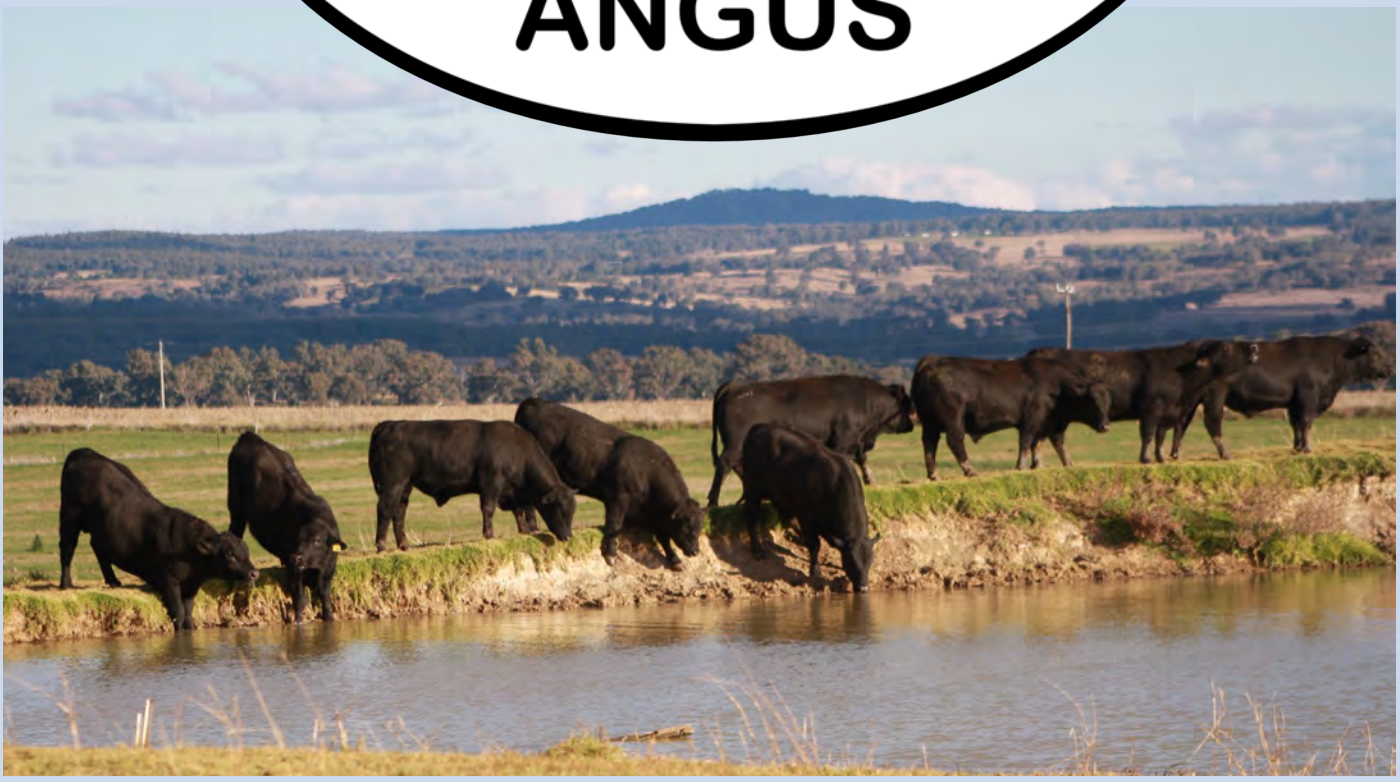
SWANBROOK

ANGUS



4TH ANNUAL BULL SALE

Saturday, 4th August 2018, 11am

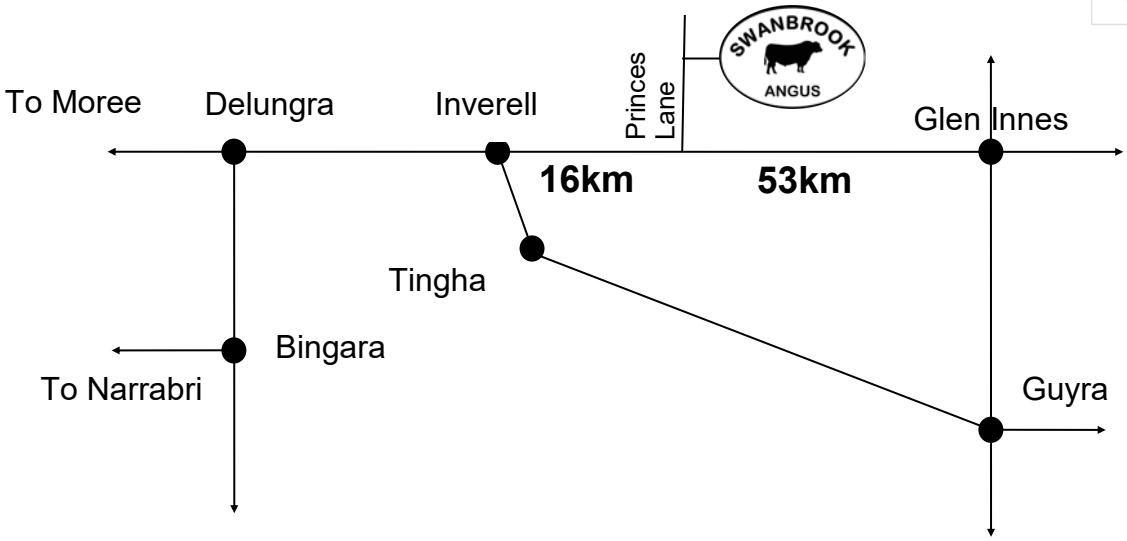
"Marble Hall", Long Plain
Glen Innes Rd, Inverell NSW

www.swanbrookangus.com.au

Glynis Turner: 0427 017 112 Nathan Purvis: 0427 324 078

SALE NOTES

LOCATION:
Swanbrook Angus is located 16km from Inverell or 53km from Glen Innes on the Gwydir Hwy. Turn onto Princes Lane and our gate is 500m from hwy.



INSPECTIONS:

Bulls will be yarded for inspection from 9am to 4pm on Tuesday 24 July.
We welcome private inspections by appointment. **Please contact Glynis on 0427017112** or 0267232334 (evenings).
Bulls will be available for inspection from 9am on the morning of sale day.

VIDEOS:

Videos of each lot are available via our website www.swanbrookangus.com.au, on our YouTube channel 'Swanbrook' or www.colinsay.com.au

INSURANCE:

Bull insurance will be available on sale day.

REBATE:

A 2% rebate is offered to outside agents introducing approved buyers in writing to the selling agents 24 hours prior to the sale and settling on their behalf within 7 days.

PHONE BIDDING:

Phone bidding can be arranged by contacting Colin Say and Co on 02 6732 1266 prior to the sale.

REFRESHMENTS:

Morning tea, lunch and refreshments will be available on sale day.
Bathroom facilities are located in the shed closest to the house.

AUCTIONS PLUS:

Our sale will be linked to Auctions Plus on the day.

TRANSPORT:

We offer free delivery within 150 km, where delivery is by OUR TRANSPORT and occurs during the week following the sale at a mutually convenient time.

No verbal instructions can be accepted regarding delivery and trucking of stock.

A Buyer's Instruction Slip must be completed and signed by the buyer or authorized representative.

CHILDREN:

Children are a vital part of the family farm. They are VERY WELCOME to our sale and some play equipment for the little ones will be available.

WELCOME TO SWANBROOK ANGUS.

The Turner family is very pleased to welcome you and to present our 2018 draft of bulls.

Many have EBVs in the top end of the Australian herd.

Our stud herd has been growing since 1998. Prior to that we ran commercial breeders and purchased store cattle to fatten. We now run 300 stud Angus females side by side with commercial cows UNDER COMMERCIAL CONDITIONS.

At Swanbrook Angus we focus on producing docile, functional, fertile cattle with growth and the flexibility to finish for the supermarket or grow on with the carcase traits to suit the long fed market.

We aim for

- A **BALANCED** calf with good growth and good carcass properties yet retain fertility and milk.
- **TEMPERAMENT** is a high priority both for safety and $ returns - quiet cattle gain more weight, finish earlier, require less labour and make life easier.
- **MODERATE MILK** figures to enable the cow to keep enough for herself to get into calf when feed is scarce.
- **ABOVE AVERAGE IMF**
- We also aim to maintain **BALANCED FAT** levels so cows have reserves for hard times and animals easily finish for sale.
- **ABOVE AVERAGE GROWTH** but with maternal cow weight less than that of 600 day weight. This gives sale cattle of good weight as well as an efficient cow herd. 39 out of 40 bulls offered this year have MATURE COW weight LESS than 600 day weight.
- We **AVOID INBREEDING** to add within-breed hybrid vigor.

Under commercial conditions, animals have to cope with shortage and utilize times of plenty. As our animals do not live in the manner to which some stud cattle are raised, those that will perform in commercial conditions rise to the top and poor doers are NOT hidden by constant feed surplus.

Our yearling females are joined in Spring, scanned in February and heifers not in calf are sold regardless of pedigree. Heifers that have calving difficulty are culled. Cows have to have a worthwhile calf every year to remain in our herd. When a cow remains until her 12th and 13th year she has proven her fertility, longevity and general merit.

Temperament is good or she is gone!

Over the past 20 years, Swanbrook has selected some of the best bulls available from Australia, USA, Canada and New Zealand to use by Artificial Insemination (AI). These sires are found in the catalogues of the top selling Angus studs across Australia.

Their calves are run with calves by natural mating so the superior calves from both systems are identified.

We AI 100 to 200 females annually, depending upon the season. Bulls from natural mating are in the catalogue having performed equally with their AI peers, and are backed up by the superior individuals in their pedigrees and by the selection pressure on their dams and grand dams.

Given the current season our bulls have been growing on lucerne hay and feed oats. They have recently converted to cracked corn as our oats have been exhausted. They are still forced to walk 700m from their feed to their water. They are fit and fat enough to show their merit and be ready for joining. They will grow into their 3rd and 4th year

THEY ARE NOT OVER FED so their useful life is likely to be longer.

VACCINATIONS & OTHER TREATMENTS

It is most important that herd bulls be protected from STDs by vaccination. They don't practice safe sex and have multiple partners - as this is their job.

Vibriosis and Leptospirosis are STDs and can cause large losses within a herd.

Leptospirosis is also transferred by saliva and urine. Feral Pigs carry Lepto and go where they please throughout the area. Water points are potential transfer locations of Lepto from pig to cow.

Humans can become infected by fluids from the infected beast.

7 in 1 vaccination of the entire herd protects both your herd from reproductive and production losses and yourself from an unpleasant long illness.

Our bulls are vaccinated from young calves with 7 in 1 - most recent was on **29th June 2018.**

Their first Vibrovax was given **29th June 2018** with a booster in July.

They were given 1 BEF (3 day sickness) vaccinations on **22nd February 2018**.

They have been given *Doracare Injection* for internal and external parasites during **July 2018.**

They have been tested to ensure they are not persistently infected with Pestivirus

SEMEN TESTING - CRUSH SIDE and LABORATORY

Swanbrook Angus aim to supply fit and fertile bulls to our clients. These bulls were fertility tested by *Inverell Vet Clinic* in June and semen samples were then laboratory tested for morphology.

The visual test gives a count of live sperm and the morphology tests that the sperm are able to get to where they are going.

Crush-side tests alone are not enough to be confident of a bull's fertility. Bulls that fail are withdrawn from sale until retested and pass.

DNA DEFECTS POLICY

Four recessive defects (AM, NH, CA and DD) have been identified in the Angus population over the past few years.

Possible carrier animals are visibly no different to the rest of the Angus herd. They are known by pedigree and then laboratory tested to either clear or label them as carriers.

No loss comes from mating carriers with non Angus herds. The defects only arise when both cow and bull carry the gene and the resulting calf carries two copies.

Stud AM and NH bull calves make fantastic steers as the financial cost of using them over Angus herds is significant.

***** We do not sell AM or NH carriers as bulls - even to non angus herds.*****

CA has a low rate of occurrence in the national Angus herd. If a calf gets a double dose of this recessive gene, the result is a slightly lesser, maybe not even visible, but a viable animal.

Of the animals with two copies of DD gene, many show no effects, some others have extra parts - underdeveloped limbs or small lumps and bumps.

Some argue that the commercial cost of DD is insignificant, others disagree.

At Swanbrook Angus, carriers of CA and DD are fully disclosed but still offered for sale.

Be very wary buying bulls from non-registered herds. There is no way you can know their genetic status. A cheap bull could cost you more than you save.

Registered animals have their DNA status in these traits displayed clearly on their pedigree by the breed society not the breeder so you can be confident in knowing what you are getting. (This is the Genetic Status : AMF, NHF, CAF, DDF etc)

Like many studs, some of our otherwise superior females carry one of those genes. DNA testing is a significant ongoing expense in offering bulls for sale.

WHEN YOU GET YOUR BULL HOME

Give your new bull some friends when he arrives - cows or steers (**not** other bulls) in a secure paddock or yard. If there are other bulls on your farm or next door, make sure there are two fences between them and allow them to yell insults at each other for a few days or weeks. If he is to become part of a group of bulls ideally introduce them to a few bulls at a time when they have full bellies in a larger paddock where there are no empty females nearby.

Swanbrook Angus uses motorbikes and dogs and quiet yet firm handling. **Our bulls will find horses strange at first**. Introduce your bull to being worked by horses when he is in a small mob of cattle and allow extra time for the task.

Maintain his vaccinations. If it is difficult to source a single dose of Vibrovax contact us.

JOINING

Our bulls are semen tested and examined by the vet. The semen test measures the fertility of the bull on the day of test. Subsequent injury or infection can compromise his ability to get calves.

Monitor your joining **-** problems can develop during joining and in subsequent years.

- Check the bull is successfully serving.
- Penile infection can occur and physical injury does happen during and after serving particularly in multiple joining groups. Prompt veterinary treatment of infection may prevent permanent loss of a bulls fertility.
- Watch for lameness, lethargy or ill health.
- Nutrition of your cows before and during joining impacts on cycling and pregnancy rates. A rising plane of nutrition is ideal although 2018 conditions have not made this easy.
- Observe cows for signs of heat. In a group of 40 cows approximately 2 will come on heat each day at the beginning of joining. If the number of cows cycling each day does not reduce after the first 3 weeks ***investigate promptly***, not when it comes time for pregnancy testing.

HANDLING BULLS

Bulls are large animals. We make sure that as calves they learn that humans are the boss in the yard and paddock. Handle gently but firmly within a group of cows or steers.

Whenever they are in a group of bulls there is potential for strife. In the yards give them twice as much space as you would the same number of steers and in smaller pens work them in ones, twos or threes.

No matter how quiet a group of bulls may seem, **always have a way out** as an argument can erupt in an instant.

Enjoy the quietness of a bull but never trust him - at over a tonne weight even an affectionate rub from a mature bull can break human ribs. (Or he could calmly walk past and accidentally bump a motorcycle.)

THE NEXT SEASON

Maintain the fertility and fitness of your bull.

- Bulls need space if running with other bulls in the off season. Younger bulls need higher nutrition to continue their growth while older bulls need to recover from the joining period, be well fed, but not get over fat.
- Give annual boosters of 7 in 1 and Vibrio vaccine.
- Get your vet to check his fertility each year prior to joining.

A bull that is fertile and functional aged 2 years may not remain so into old age. It is wise to annually have your vet check your bulls for viable sperm and physical injury to his reproductive gear. Even in multiple joining groups one dud bull, if he is the dominant bull, can significantly reduce pregnancy rates.

Understanding Estimated Breeding Values (EBVs)

Estimated Breeding Values (EBVs) are predictions of an animal's genetic merit, based on available performance data on the individual and its relatives.

EBVs are expressed in the units of measurement for each particular trait. They are shown as +ive or -ive differences from the breed base. As the breed base is set to a historical benchmark, the average EBVs of animals in each year drop has changed over time as a result of genetic change within the breed. The current breed averages are shown below. These averages provide a useful benchmark for comparing EBVs for animals.

	July 2018 Angus Australia BREEDPLAN										
	Calving Ease Dir	Calving Ease Dtrs	Gest Length (days)	Birth Wt (kg)	200 Day Wt (kg)	400 Day Wt (kg)	600 Day Wt (kg)	Mature Cow Wt (Kg)	Milk (kg)	Days to Calving	Scrotal
	+0.1	+0.3	-3.9	+4.3	+43	+79	+103	+43	+89	-4.1	-1.7

Carc Wt (kg)	EMA (sq cm)	Rib Fat (mm)	Rump Fat (mm)	RBY (%)	IMF (%)	NFI-P (kg/day)	NFI-F (kg/day)	Docility (trial)	Angus Breeding	Domestic	Heavy Grain	Heavy Grass
+58	+4.8	+0.0	-0.1	+0.3	+1.6	+0.09	+0.15	+5	+$109	+$105	+$113	+$108

CALVING EASE TRAITS

Calving Ease (DIR): estimate of genetic differences among animals in the ability of their calves from 2 year old heifers to be born unassisted. Higher, more +ive, Calving Ease (DIR) EBVs are more favourable.

Calving Ease (DTRS): estimates of genetic differences among animals in the ability of their 2 year old daughters to calve without assistance. Higher, more +ive, Calving Ease (DTRS) EBVs are more favourable.

Gestation Length: estimate of genetic differences among animals in the number of days from the date of conception until the calf birth date. Lower, or more -ive, Gestation Length EBVs are generally more favourable.

Birth Wt: estimate of genetic differences between animals in kg of calf birth weight. Calf birth weight is the biggest contributing factor causing calving difficulty in heifers. While low Birth Wt EBVs are favoured for calving ease they are also often associated with lower growth potential. Small, or moderate, Birth Wt EBVs are more favourable.

FERTILITY TRAITS

Days to Calving (DC): estimate of genetic differences among in female fertility, expressed as the number of days from the start of the joining period until subsequent calving. Females with shorter DC EBVs tend to commence cycling earlier after calving and conceive earlier in the joining period. They also tend to attain puberty at a younger age as heifers. Lower, or more -ive, Days to Calving EBVs are more favourable.

Scrotal Size: estimate of the genetic differences among animals in scrotal circumference at 400 days of age. Increased scrotal size is associated with increased semen production in bulls, and earlier age at puberty of bull and heifer progeny. Larger, or more +ive, Scrotal Size EBVs are more favourable.

GROWTH TRAITS

200-Day Wt: estimate of the genetic differences among animals in weight at 200 days of age. This is a measure of an animal's early growth to weaning. It is an important trait for breeders turning off animals as vealers or weaners.

400-Day Wt: estimate of the genetic differences among animals in weight at 400 days of age. This is an important trait for breeders turning off animals as yearlings.

600-Day Wt: estimate of the genetic differences among animals in live-weight at 600 days of age. This is an important trait for breeders targeting the production of animals suited for heavy weight grass finished or grain fed market

MATERNAL TRAITS

Milk: estimate of the genetic differences among animals in milk production potential, expressed through variation in calf growth performance. Larger, more +ive, or moderate, Milk EBVs can be more favourable, depending on the environment.

Mature Cow Wt: estimate of the genetic differences among animals in cow weight at 5 years of age.

CARCASE TRAITS

Carcase Wt: estimate of the genetic differences among animals in hot standard carcase weight at 750 days of age. Larger, more +ive, Carcase Weight EBVs are more favourable.

EMA: estimate of the genetic differences among animals in eye muscle area (cm2) at the 12/13th rib site on a 400kg carcase. Larger, more +ive, EMA EBVs are generally more favourable.

Rib Fat: estimate of the genetic differences among animals in fat depth (mm) at the 12/13th rib site, measures on a 400kg carcase. More positive (+ive), or more negative (-ive), Rib Fat EBVs may be more favourable, depending on your breeding goals.

Rump Fat: estimate of genetic differences among animals in fat depth at the P8 rump site on a standard 400kg carcase. More positive (+ive), or more negative (-ive), Rib Fat EBVs may be more favourable, depending on your breeding goals.

IMF%: estimate of genetic differences among animals in percentage intra-muscular fat (marbling) in a 400kg carcase.

EFFICIENCY TRAITS

Net Feed Intake (NFI): estimate of the genetic differences between animals in efficiency. NFI is measured either post weaning (NFI-P), in young bulls and heifers, fed at around 300 days of age, or in steers fed at around 560 days of age (NFI- F). Lower, more negative (–ive) NFI EBVs are more favourable.

TEMPERAMENT TRAITS

Docility: estimate of genetic differences between animals in temperament. Docility EBVs are expressed as differences in the percentage of progeny that will be scored with acceptable temperament (ie. either "docile" or "restless"). Higher Docility EBVs are more favourable.

$INDEX VALUES

Angus Breeding: estimates the genetic differences between animals in net profitability per cow, joined in a typical commercial self-replacing herd using Angus bulls. This selection index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems. The index is particularly suited to commercial producers who sell progeny into different markets, or to seedstock producers supplying bulls to commercial clients who produce for a range of different production systems and market end points.

Domestic: estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing herd targeting the domestic supermarket trade, with progeny finished using either grass, grass supplemented by grain or grain finishing systems.

Heavy Grain: estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets.

Heavy Grass: estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing herd targeting pasture finished heavy steers.

TRAITS OBSERVED

Indicates the traits that have been recorded for a particular animal and are contributing to the EBVs that have been calculated. These will appear directly below the table displaying the animals EBVs.

UNDERSTANDING ACCURACIES

The accuracy associated with an EBV gives an indication of its reliability, and the likely extent of its possible change as more information becomes available. As more data becomes available on animals (or its progeny, or relatives) then the accuracy of its EBVs for particular traits will increase.

Accuracies are influenced by the heritability of traits and the genetic associations existing between them. For lowly heritable traits, more information is required to achieve a similar accuracy to that of highly heritable traits.

Accuracies are expressed as percentages. The higher the percentage, the greater the chance that the EBV is a close estimate of the animal's true genetic merit, and the less likelihood that the EBV will change as more information becomes available.

IMPORTANT NOTICES FOR PURCHASERS

~ SALE CATALOGUE DISCLAIMER ~

All reasonable care has been taken by the vendor to ensure that the information provided in this catalogue is correct at the time of publication. However, neither the vendor nor the selling agents make any other representations about the accuracy, reliability or completeness of any information provided in this catalogue and do not assume any responsibility for the use or interpretation of the information included in this catalogue. You are encouraged to seek independent verification of any information contained in this catalogue before relying on such information.

~ DNA PATERNITY VERIFICATION ~

It is a requirement of Angus Australia that all bulls used to sire calves for registration in the Angus Australia Herd Book Register, Red Angus Register or Angus Performance Register must have been DNA paternity verified if they are born in or after the 'Y' year (2003). Buyers intending to use bulls listed in this catalogue to produce calves to be registered in these registers should obtain DNA paternity verification on those bulls before they are used for breeding.

~ PRIVACY INFORMATION ~

In order for Angus Australia to process the transfer of a registered animal in this catalogue, the vendor will need to provide certain information to Angus Australia and the buyer consents to the collection and disclosure of that information by Angus Australia in certain circumstances. If the buyer does not wish for his or her information to be stored and disclosed by Angus Australia, the buyer must complete the form included below and forward it to Angus Australia. If the form is not completed, the buyer will be taken to have consented to the disclosure of such information.

BUYER'S OPTION TO OPT OUT OF DISCLOSING PERSONAL INFORMATION TO THE ANGUS AUSTRALIA

If you do not complete this form, you will be taken to have consented to Angus Australia using your name, address and phone number for the purposes of effecting a change of registration of the animal(s) that you have purchased, maintaining its databases and disclosing that information to its members on its website.

I, the buyer of animals with the following registration numbers .... from member ..... (name) do <u>not</u> consent to Angus Australia using my name, address and phone number for the purposes of effecting a change of registration of the following animal(s) that I have purchased, maintaining its databases and disclosing that information to its members on its website.

Signature: .....

Date: .....

Please forward this completed consent form to Angus Australia, Glen Innes Road, Locked Bag 11, Armidale NSW 2350. If you have any queries, please telephone 02 6772 3011 or e-mail office@angusaustralia.com.au.
