SWANBROOK

ANGUS

9th ANNUAL BULL SALE

SATURDAY, 29TH JULY 2023, 11AM

"Marble Hall", 50 Princes Lane, Long Plain

Inverell NSW

swanbrookangus.com.au

40 ANGUS BULLS

OPEN DAY

THURSDAY 27TH JULY

10 AM - 4PM

Enquiries Welcome Glynis Turner: 0427 017 112

LOT 1 SWANBROOK S140 SV

SIRE: CLUNIE RANGE PLANTATION P392 SV

LOT 2 SWANBROOK S157 SV

SIRE: CHILTERN PARK MOE M6 PV

LOT 3 SWANBROOK S171 SV

LOT 8 SWANBROOK S328 PV

SIRE: SWANBROOK RIGHT ANSWER M4 PV

SWANBROOK ANGUS

ANNUAL BULL SALE

SATURDAY 29th July 2023 11am

Bulls for available for Inspection from 9am

OPEN DAY
Bulls will be yarded for inspection from 10am to 4pm on **Thursday 27 July 2023.**

We welcome private inspections by appointment. **Please contact Glynis on 0427017112**

Each lot information and video can be viewed at;

www.swanbrookangus.com.au
www.angusaustralia.com.au

COVID
Our Sale will operate in line with current COVID restrictions. Whilst on-property we ask that you follow these. If you are ill, please refrain from attending & access the sale via AuctionsPlus or through your Agent.

REFRESHMENTS:
Lunch and refreshments will be available on sale day with compliments of the Turner family.

INSURANCE:
Bull insurance will be available on sale day.

THE AUCTION:
This year the auction will be in the comfort of the shed.
The bulls will remain in the inspection pens and their videos will be shown on screen next to the auctioneer.

AuctionsPlus

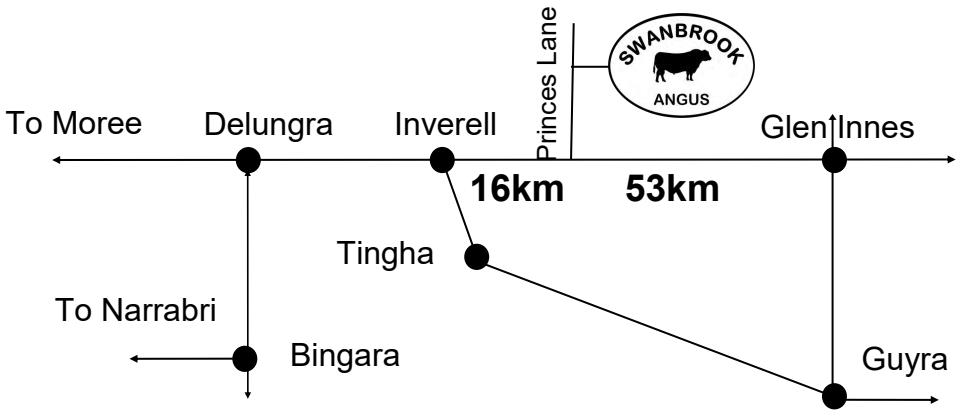
The Sale will be interfaced with
Auctions Plus
www.auctionsplus.com.au

REBATE:
A 2% rebate is offered to outside agents introducing approved buyers in writing to the selling agents 24 hours prior to the sale and settling on their behalf within 7 days.

TRANSPORT:
We offer free delivery within 150 km, where delivery is by OUR TRANSPORT and occurs during the week following the sale at a mutually convenient time.

No verbal instructions can be accepted regarding delivery and trucking of stock.

A Buyer's Instruction Slip must be completed and signed by the buyer or authorised representative.



LOCATION:
Swanbrook Angus is located 16km from Inverell or 53km from Glen Innes on the Gwydir Hwy. Turn onto Princes Lane and our gate is 500m from hwy.

WELCOME TO SWANBROOK ANGUS.

The Turner family is very pleased to welcome you and to present our 2023 draft of bulls.

Our stud herd has been growing since 1998. Prior to that we ran commercial breeders and purchased store cattle to fatten.

We now run over 400 stud Angus females side by side with commercial cows UNDER COMMERCIAL CONDITIONS.

At Swanbrook Angus we focus on producing docile, functional, fertile cattle with growth and the flexibility to finish for the supermarket or grow on with the carcase traits to suit the long fed market.

We aim for

- A **BALANCED** calf.
- **TEMPERAMENT** is a high priority both for safety and $ returns - quiet cattle gain more weight, finish earlier, require less labour and simply make life easier.
- **MODERATE MILK** figures to enable the cow to keep enough for herself to get into calf when feed is scarce.
- **ABOVE AVERAGE IMF** for meat quality
- **BALANCED FAT** levels so cows have reserves for hard times and animals easily finish for sale.
- **FEED EFFICIENCY** for profit from calving through to the feedlot.
- **ABOVE AVERAGE GROWTH** but with maternal cow weight less than that of 600 day weight. This gives sale cattle of good weight as well as an efficient cow herd.
- We **AVOID INBREEDING** to add within-breed hybrid vigor.

Commercial animals have to cope with shortage and utilize times of plenty. As our animals do not live in the manner to which some stud cattle are raised, those that will perform in commercial conditions rise to the top and poor doers are NOT hidden by constant feed surplus.

Our yearling females are joined in Spring, scanned in February and heifers not in calf are sold regardless of pedigree. Heifers that have calving difficulty are culled. Cows have to have a worthwhile calf every year to remain in our herd. When a cow remains until her 12th and 13th year she has proven her fertility, longevity and general merit.

Temperament is good or she is gone!

We normally Artificially Inseminate 100 to 300 females annually, depending upon the season. The draft of bulls are mainly by Swanbrook bulls. **They excelled ahead of their AI bred peers.**

Both dams and sires of this years bulls are backed by the generations of superior genetics brought to the herd in the AI can.

Note that the bulls are not yet 2 years old. The youngest is 20 months old.

THEY ARE NOT OVER FED so their useful life is likely to be longer.

They are fit and fat enough to show their merit and be ready for joining. They will grow into their 3rd and 4th year.

A younger bull may last a year longer after purchase than a 2 and a bit year old. A bull not carrying weight from excess feeding is less likely to break down. These young fit bulls have the potential to last more joining seasons. This spreads their purchase price over more calves.

VACCINATIONS & OTHER TREATMENTS

It is most important that herd bulls be protected from STDs by vaccination. They don't practice safe sex and have multiple partners - as this is their job.

VIBRIOSIS AND LEPTOSPIROSIS are STDs and can cause large losses within a herd.

Leptospirosis is also transferred by saliva and urine.

Feral Pigs carry Lepto and go where they please throughout the area. Water points are potential transfer locations of Lepto from pig to cow.

Humans can become infected by fluids from the infected beast. It is also carried by mice feed contaminated by mice can infect animals and humans .

Our bulls are vaccinated from young calves with **7 in 1** - their latest booster was 24 April 2023. Annual booster will be due April 2024.

Their first **Vibrovax** was given April 2023 with a booster in July. Annual booster will be due July 2024.

PESTIVIRUS also has potential to cause big loses in breeding heards.

Their first **Pestiguard** was given April 2023 with a booster in July. Annual booster will be due July 2024.

They have been tested to ensure that they are not persistently infected with Pestivirus.

5 July they were also given an Ivermectin backline for internal and external parasites.

SEMEN TESTING - CRUSH SIDE and LABORATORY

Swanbrook Angus aim to supply fit and fertile bulls which will last many seasons to our clients.

Swanbrook 2023 sale bulls were evaluated for **Bull Breeding Soundness** by **Inverell Vet Clinic** on 29th May which includes:

Structure assessment

Internal examination of reproductive organs

Crush side assessment of semen motility then

Semen was laboratory tested for morphology.

The visual test gives a count of live sperm and the morphology tests that the sperm are able to get to where they are going.

Crush-side tests alone are not enough to be confident of a bull's fertility. Bulls that fail are withdrawn from sale until retested and pass.

SIRE VERIFICATION AND DNA

The bulls have been **Sire verified** and **genome** tested.

Sire verification gives you confidence in the description of the bulls catalogued.

The genomics results are entered into the calculation of Estimated Breedplan Values (EBVs) and adds accuracy to EBV predictions.

Due to factors beyond our control, the DNA test results were not received in time to establish EBVs for some of the bulls prior to the July EBV run. These EBVs will be updated approximately 15th July in the Angus Australia website and on our website.

FOUR RECESSIVE DEFECTS (AM, NH, CA and DD) have been identified in the Angus population over past years. Registered animals have their DNA status in these traits displayed clearly on their pedigree by the breed society not the breeder so you can be confident in knowing what you are getting. (This is the Genetic Status : AMF, NHF, CAF, DDF etc.)

For further information refer to the Angus Australia web-site: https://www.angusaustralia.com.au/education/breeding-and-genetics/genetic-conditions-in-angus/

SELECTING BULLS FOR JOINING HEIFERS

When selecting a bull to join heifers the first priority is a live cow and calf.

Next is a calf that will grow into a money maker.

The best outcome is if the heifer portion born from heifers are good enough to retain as replacement heifers.

If the heifers out of heifers are good enough to keep in the herd, then genetic progress is accelerated by many years.

Consider first **birth weight**, then **gestation length** and **calving ease**.

A live calf on the ground is the most important.

Some bulls with desirable birth weight, gestation length and calving ease, sire growthy calves that will stack up against calves of older cows in your herd. If those live calves have the potential to grow this is a double bonus.

Some of the bulls on offer this year are calves of heifers.

Our heifers are joined to calve aged 2 years old.

For their sons to stack up against calves of older cows shows their worth.

Lots to consider for heifer joining:

Lot 1, 12, 14, 25, 26, 28, 29, 30, 32, 36, 37, 38 & 39.

Other considerations are the heifers to be joined – age and how well grown they are at joining, what feed and management they will experience during pregnancy, and the amount of time available to observe them during calving.

WHICH BULL TO BREED REPLACEMENT HEIFERS?

When choosing a bull to breed keeper heifers, consider:

CE Dtrs and Gestation length—indicators of daughter's ability to calve

Scrotal Size and Days to Calving—indicators of his daughters' fertility

NFI—That will give an indication of how much feed his offspring will consume compared to other cattle.

Unless your cows haven't sufficient Milk, excessive MILK EBVs could reduce the fertility of your herd.

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV : both parents have been verified by DNA
SV : the sire has been verified by DNA
DV : the dam has been verified by DNA
: DNA verification has not been conducted
E : DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

Attention Buyer

Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, Angus Australia will assume no responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

WHEN YOU GET YOUR BULL HOME

Give your new bull some friends when he arrives - cows or steers (**not** other bulls) in a secure paddock or yard.

If there are other bulls on your farm or next door, make sure there are two fences between them and allow them to yell insults at each other for a few days or weeks. If he is to become part of a group of bulls ideally introduce them to a few bulls at a time when they have full bellies in a larger paddock where there are no empty females nearby.

Swanbrook Angus uses motorbikes, horses and dogs and quiet yet firm handling.

Maintain his vaccinations. If it is difficult to source a single dose of Vibrovax please contact us

JOINING

Our bulls are semen tested and examined by the vet. The semen test measures the fertility of the bull on the day of test. Subsequent injury or infection can compromise his ability to get calves.

Monitor your joining **-** problems can develop during joining and in subsequent years.

- Check the bull is successfully serving.
- Penile infection can occur and physical injury does happen during and after serving particularly in multiple joining groups. Prompt veterinary treatment of infection may prevent permanent loss of a bulls fertility.
- Watch for lameness, lethargy or ill health.
- Nutrition of your cows before and during joining impacts on cycling and pregnancy rates. A rising plane of nutrition is ideal.
- Observe cows for signs of heat. In a group of 40 cows approximately 2 will come on heat each day at the beginning of joining. If the number of cows cycling each day does not reduce after the first 3 weeks ***investigate promptly***, not when it comes time for pregnancy testing.

HANDLING BULLS

Bulls are large animals. We make sure that as calves they learn that humans are the boss in the yard and paddock. Handle gently but firmly within a group of cows or steers.

Whenever they are in a group of bulls there is potential for strife. In the yards give them twice as much space as you would the same number of steers and in smaller pens work them in ones, twos or threes.

No matter how quiet a group of bulls may seem, **always have a way out** as an argument can erupt in an instant.

Enjoy the quietness of a bull but never trust him - at over a tonne weight even an affectionate rub from a mature bull can break human ribs.

THE NEXT SEASON

Maintain the fertility and fitness of your bull.

- Bulls need space if running with other bulls in the off season. Younger bulls need higher nutrition to continue their growth while older bulls need to recover from the joining period, be well fed, but not get over fat.
- Give annual boosters of 7 in 1 and Vibrio vaccine.
- Get your vet to check his fertility each year prior to joining.

A bull that is fertile and functional aged 2 years may not remain so into old age. It is wise to annually have your vet check your bulls for viable sperm and physical injury to his reproductive gear. Even in multiple joining groups one dud bull, if he is the dominant bull, can significantly reduce pregnancy rates.

AuctionsPlus

How to Register and Bid on AuctionsPlus

1. Go to **www.auctionsplus.com.au** to register at least 48 hours before the sale.
2. Select "**Sign Up**" in the top right hand corner.
3. Fill out your name, mobile number, email address and create a password.
4. Go to your emails and confirm the account.
5. Return to AuctionsPlus and log in.
6. Select "**Dashboard**" and then select "**Request Approval to Buy**".
7. Fill in buyer details and once completed go back to Dashboard.
8. Complete buyer induction module (approx. 30 minutes).
9. AuctionsPlus will email you to let you know that your account has been approved.
10. Log in on sale day and connect to auction.
11. Bid using the two-step process – unlock the bid button and bid at that price.
12. If you are successful, the selling agent will contact you post sale to organise delivery and payment.

For more information please contact us on:

Phone: (02) 9262 4222

UNDERSTANDING THE TRANSTASMAN ANGUS CATTLE EVALUATION (TACE)

What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcase, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcase than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes. For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcase merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

Calving Ease	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	CEDtrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
Carcase	CWT	kg	Genetic differences between animals in hot standard carcase weight at 750 days of age.	Higher EBVs indicate heavier carcase weight.
	EMA	cm^2	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate larger eye muscle area.
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more fat.
	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcase.	Higher EBVs indicate more fat.
	RBY	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcase.	Higher EBVs indicate higher yield.
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.	Higher EBVs indicate more intramuscular fat.
Feed/ Temp.	NFI-F	kg/ day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
Structure	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate more desirable foot angle.
	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate more desirable claw structure.
Selection Index	$A	$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
	$A-L	$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems. The $A-L index is similar to the $A index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the $A aims to maintain mature cow weight, the $A-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.

TransTasman Angus Cattle Evaluation - July 2023 Reference Tables
